About me

As a technology lover enjoying challenges I have chosen this job because of the day to day problems it presents. Indeed from my **AWS Service administrator** role to my **DevOps Coach** one going through my **FullStack engineer** and **Kubernetes evangelist** hats, I encounter many opportunities to help people improving their skills and thus to improve mines in so many areas.

I like develop people, in my personal life I am a **karate teacher** since 16 years, in my job **I am creating trainings around Docker, Jenkins and Kubernetes** for which I make myself an evangelist because I am persuade that 's the tomorrow way to host applications.

In my current job, **I am an AWS Service, Jenkins and Artifactory administrator**. I also deploy and maintain my team monitoring tools such as **Grafana, Kibana, Elasticsearch and Fluentd**. I am **active on DXC Workplace** to help people in their job but also to onboard teams to our DevCloud solution.

Soft skills

Perseverant	Curious
Creative	Committed
Organized	Involved
